Trephine Kit	57
Prosthetic Kit	58
Planning Kit	59
Prosthetic and Laboratory Instrument	60
Help Kit	62

A grayscale micrograph showing a cross-section of bone tissue. The bone has a porous, trabecular structure. A dark, irregularly shaped region, likely the CaP coating, is visible on the left side of the image, partially covering the bone surface. The background is a solid dark color.

CaP Coating

- Allows faster rate of cell adhesion
- Achieve primary stability of surrounding bone earlier after initial implant placement

S.L.A. Surface

S.L.A. (Sandblasting with large grit and acid etching)

- Proven surface treatment with over 10 years of long-term clinical data
- Clinically yields excellent bone response

Implantium II Characteristics

CaP Coating

- Allows faster rate of cell adhesion
- Achieve primary stability of surrounding bone earlier after initial implant placement

The application of a thin film of CaP on S.L.A. surface yielded better results in osseointegration during in vivo test

S.L.A. Surface

- Proven surface treatment with over 10 years of long-term clinical data
- Clinically yields excellent bone response

Implantium II Characteristics

A Extended Cutting Edge

- Improved self-tapping ability
- Allows more control over the depth of fixture placement
- Alleviates the occurrence of over-torque during placement in dense bone

B Bacteria Resistant Bevel

- The tapered bevel platform design may make bone profiling unnecessary at 1st, 2nd surgery.

C Biological Connection

- The conical hex connection between implant and abutment interface ensures hermetic sealing.
- The biologic connection distributes the load to the fixture evenly. Therefore it helps minimize micro-movement and marginal bone loss.
- All implant diameters share the same internal hex.

D Biological Connection

- Thread platform design creates excellent bone to implant contact.
- Threads engage and penetrate bone with ease.

E Quadruple & Double thread Design

- Chair time decreased through faster fixture placement

F Optimal Fixation Threads

- Greater advantage for Immediate and Early Loading
- Enhanced initial stability through longer and sharper threading

G Maintained Compatibility

- Prosthetic components and Surgical Kit 100% compatible with the existing Implantium II Implant System

Implantium II Color Coding by Diameter

Color Coding by Diameter

• Cover screw is not included. (Unit: mm)
